Linkedin | Github | Nhimbhu | Portfolio

Summary

Software Developer and AI Engineer with experience building full-stack applications and agentic AI systems using Type Script, Node.js, React, LangChain, LangGraph, RAG, and LLM APIs. Experienced in building tool-calling agents, real-time applications, REST APIs, and production-oriented backend systems.

Education

Dronacharya College of Engineering Gurugram, Haryana, India
B.Tech in Computer Science and Engineering (CSE) Graduated:2026
Coursework: DSA, OOP, Web Development, DBMS, Software Engineering, Operating Systems, Computer Networks

Technical Projects

AgentForge-AI-Agentic-AI-SaaS-Platform [GitHub] *Next.js, React.js, LangGraph, LangChain, Groq API, Hybrid RAG, Drizzle ORM,Pinecone*

- Built a **router-based agent workflow** with **LangGraph** that classifies user queries into RAG, tool, or general paths and routes each request through the appropriate agent workflow.
- Built a **Hybrid RAG** pipeline combining **384-dimensional** dense embeddings, **BM25** sparse retrieval, and Reciprocal Rank Fusion (RRF); evaluated 35 questions and improved **MRR@10 from 0.80 to 0.96 and Recall@5 from 0.90 to 0.96** using a cross-encoder reranker.
- Built an MCP-based tool workflow by creating an **MCP server** to expose tools and connecting it through an **MCP client**, enabling the agent to dynamically discover and execute tools within the LangGraph workflow.

MCP-Powered GitHub AI Agent [GitHub] *TypeScript, MCP, Groq, Hono, Bun, Octokit, Zod*

- Engineered an **MCP-based AI agent** that **dynamically discovers tools and resources**, enabling an LLM to interact with GitHub through structured MCP capabilities instead of direct API coupling.
- Implemented **sequential multi-step tool orchestration** with iterative tool-result feedback and bounded execution, allowing the agent to perform workflows such as repository discovery, code search, issue retrieval, and issue creation.

TradeFlow-Zerodha-Style Trading Platform (Custom Engine) [GitHub] [Live] *React.js, Node.js, Express.js, MongoDB, Socket.io,Material UI,Recharts,LLM Integration*

- Built a full-stack trading simulation platform with Zerodha-inspired UI, enabling virtual buy/sell execution, real-time portfolio tracking, and PL analytics with secure **JWT-based authentication**.
- Developed a custom mock stock engine (no external APIs) using WebSockets to simulate live market behavior, broadcasting price updates every 5 seconds to multiple clients, and integrated a **Gemini 2.5 Flash-powered** AI trading assistant for natural-language market insights and intelligent buy/sell decision support

Airbnb-Inspired Property Rental Platform [GitHub] [Live] *Node.js, Express.js, MongoDB, Cloudinary, Mapbox*

- Engineered a production-ready full-stack rental marketplace with RESTful API architecture supporting property listing creation, advanced filtering, and seamless booking functionality.
- Implemented **MVC architecture** with session-based authentication and integrated Cloudinary for scalable image storage and **Mapbox API** for geolocation-driven property visualization.

Technical Skills

- **Languages:** Java, JavaScript, TypeScript, Python, C++, SQL
- **Frontend:** React.js, Next.js, Tailwind CSS, shadcn,Vercel AI Component
- **Backend:** Node.js, Express.js, REST APIs, WebSockets, MongoDB, PostgreSQL, Drizzle ORM, JWT
- **DevOps & Tools:** Git, GitHub, Docker, Kubernetes, CI/CD, Postman, Netlify, Vercel, Render
- **AI/ML:** Generative AI, Agentic AI, Prompt Engineering, RAG, Hybrid Search, Reranking, RAG Evaluation, Pinecone, MCP , Tool Calling, Prompt Engineering

Achievements / Coding Profiles

- Solved **100+ DSA problems** on LeetCode with Java, covering arrays, linked lists, trees, graphs, and dynamic programming.
- **GitHub:** github.com/devtanishq-tech **LeetCode:** leetcode.com/tanishq **Portfolio:** tanishq.dev

Leadership / Activities

- Actively contributed to peer code reviews and collaborative full-stack development sessions, mentoring peers on system design, REST API patterns, and deployment best practices.
